

## Important instructions regarding electronic locks

**General: keep codes and code mediums away from unauthorized persons therefore it is recommended to keep the codes and code mediums in a safe place to which only authorized persons have access. When a code or code medium is lost, we recommend to immediately alter the lock to a new code / code medium or to change the lock.**

- Please note that the factory-set secret code should be altered as soon as the lock has been put into operation
- Simple codes that can easily be guessed, i.e. 1, 2, 3, 4, 5, 6, should not be used.
- Do not use any personal data (such as a birthday) or other dates that others may be familiar with, simply because they know you.
- After changing the secret code, please make sure the new code works properly by trying it out several times with the safe door open.
