Electronic lock E4000
Control panel

The electronic lock type E4000 is approved to VdS-Class 2 (B) as well as to ECB-S Class B and F+P-Class B, has the BSI-approval, the Swedish SIS-approval and is listed in the USA as UL type 1. The externally mounted control panel consists of a high-quality, easy cleaning sealed keypad for entering of the 6- to 8-digit secret code. The keypad is designed for more than 1 million key entries. Through the mechanical pressure-points of the keys, the operator receives tactile check-back signals. The last 50 entry events are stored. The control panel contains the battery compartments and is equipped with an easily operated handle for the manual unblocking of the lock. The sounding of different acoustic signals assists the user in performing the various operations. As an alternative, electronic lock type E4000 can be supplied with the keypad on the left. Upon request, the control panel can be provided with the user's company logo and with a metallic surface finish.
